

LIPID ANALYSIS

NEW!
4th Edition

Isolation, Separation, Identification and Lipidomic Analysis

Written by William W. Christie¹ and Xianlin Han²

¹ MRS Lipid Analysis Unit, Scottish Crop Research Institute, Invergowrie, Dundee, Scotland.

² Division of Bioorganic Chemistry and Molecular Pharmacology, Department of Medicine, Washington University School of Medicine, St Louis, Missouri, USA.

Published in 2010. ISBN 978-0-9552512-4-5. 446 pages, 14 tables, 97 figures, 776 references. Volume 24 in The Oily Press Lipid Library.

At the 2010 AOCS annual meeting Dr William W. Christie, author of *Lipid Analysis*, will be presented with one of the most prestigious awards made by the AOCS, the **2010 Supelco/Nicholas Pelick - AOCS Research Award**, which recognizes outstanding original research in fats, oils, lipid chemistry, or biochemistry and specifically Dr Christie's substantial research record, and the founding of **The Oily Press** and the **Lipid Library**.

William W. Christie's *Lipid Analysis* has long been recognised worldwide as the leading book on the subject. First published in 1973, the much appreciated and highly successful book was completely re-written in subsequent editions (published in 1982 and 2003). Every scientist who has been faced with the need to analyse lipids will have used one or more of these earlier editions. This new Fourth Edition has become necessary because of the pace of developments in mass spectrometry of intact lipids, which has given recognition of lipid analysis and 'lipidomics' as a distinct science. To bring the book up to date with these developments, author William W. Christie is joined by co-author Xianlin Han. Although devoting considerable space to mass spectrometry and lipidomics, *Lipid Analysis* remains a practical guide, in one volume, to the complexities of the analysis of lipids. As in past editions, it is designed to act as a primary source, of value at the laboratory bench rather than residing on a library shelf.

Contents

- Lipids: their structures and occurrence
 - Chromatographic analysis of lipids: general principles
 - Lipid extraction, storage and sample handling
 - Analysis of simple lipid classes
 - Chromatographic analysis of phospholipids and glycosyldiacylglycerols
 - Chromatographic analysis of sphingolipids
 - Preparation of derivatives of fatty acids
 - Gas chromatographic analysis of fatty acid derivatives
 - Isolation of fatty acids and identification by spectroscopic and related techniques
 - Molecular species of triacylglycerols, diacylglycerols derived from complex lipids, and related lipids
 - Chromatographic analysis of molecular species of intact phospholipids and glycolipids
 - Positional distributions of fatty acids in glycerolipids
 - Introduction to mass spectrometric analysis of lipids in lipidomics
 - Characterization of lipids by electrospray ionization mass spectrometry
 - Practical identification of individual lipid species in lipid extracts of biological samples
 - Quantification of lipid molecular species by electrospray ionization mass spectrometry
-
